

Access an FPGA right now!

On this page:

https://ps1.fpgas.online

Remotely access and control an FPGA development board!
There is even a camera to see the LEDs.

3:39:06 PM: dnsmasq: tftp get /srv/tftp/042f5d08/kernel7.img sent 7,810,064 bytes
3:39:13 PM: dnsmasq: dhcp add b8:27:eb:2f:5d:08 10.21.0.102 pi2 pi2
3:39:15 PM: dnsmasq: dhcp old b8:27:eb:2f:5d:08 10.21.0.102 pi2 (none)
3:39:26 PM: piview: ArtyBlink
3:39:26 PM: piview: ArtyHere Arty board detected.
3:39:27 PM: piview: Raspberry_Pi_3_Model_B_Rev_1
3:39:27 PM: piview: cam cam sending video feed to server (60 second latency.)
3:39:27 PM: piview: ssh ssh server started.
3:39:34 PM: piview: ArtyWire Arty pmod wire test passed.
```

web socket test message | Send | Check PoE

Pi patch cable color: grey

Accessing directly

```
vlc https://ps1.fpgas.online/live/pi2.m3u8
```

Use your own ssh client. user: pi, host: ps1.fpgas.online, port 10222, (password is in login banner)
click to copy:

```
ssh -p 10222 pi@ps1.fpgas.online
```

Come to PS:1 and see where it lives.
