1,000 custom silicon chips for $2.00 each

wafer.space

Budget Silicon Manufacturing

https://wafer.space

Submission Deadline for next run

16 December 2026

Interesting Designs:

@tholin - WS-Multi — 6502/6510/PLA replicas, SID replicas, Digital-to-Analog converters

https://github.com/AvalonSemiconductors/ws-submission-2025

Mike Bell — TinyQV - Crowdsourced Risc-V SoC

https://github.com/MichaelBell/ws01-tinyQV

BreakingTTAPs

Transport Triggered Architecture processor

https://github.com/polyfractal/BreakingTTAPs

@lofty — Chess-move-generator

https://github.com/Ravenslofty/gf180mcu-chess

Leo Moser

Open source FPGA generated using the FABulous eFPGA framework

https://github.com/mole99/gf180mcu-fabulous-fpga

Hiroshi - KianV — A 32-bit RISC-V Linux SoC

https://github.com/splinedrive/gf180mcu-kianv-rv32ima-sv32/

Renaldas Zioma — Silicon proven, pin compatible, open-source replacement for Zilog Z80

https://github.com/rejunity/ws0-z80-open-silicon-gf180mcu

Peter Kinget — The MOSbius chip enables learning about measuring CMOS circuits and comparing their operation to analytical design & analysis

https://www.crowdsupply.com/wafer-space/gf180mcu-run-1/updates/mosbius
